## G2-M1-Lesson 1

## Fluency Practice

Making ten and adding to ten is foundational to future Grade 2 strategies. Students use a number bond to show the part-whole relationship with numbers.

$10=7+3$

I need to be careful when looking at the signs.
This says 10 equals $7+$ $\qquad$ not 10 plus $7=$ $\qquad$ That means 10 is the same as $7+3$.

## G2-M1-Lesson 2

## Fluency Practice

Making the next ten and adding to a multiple of ten is foundational to future Grade 2 strategies. Students continue to use a number bond to show the part-whole relationship with numbers.

1. $30+6=36$

2. $64=60+4$

I can break apart 64 into tens and ones.
64 is 6 tens and 4 ones, so $64=60+4$.
3. $35=\mathbf{3 0}+5$

I can think 35 is 5 and what?

## G2-M1-Lesson 3

Add and Subtract Like Units, Ones, To Solve Problems Within 100

1. $20+7=27$

$$
20+7=
$$

$$
\text { I can think } 2 \text { tens }+7 \text { ones }=2 \text { tens } 7 \text { ones. }
$$

To solve $20+70$ add tens to tens. The units are
the same, so I can add them together.
2 tens +7 tens $=9$ tens.
3. $62+3=65$
4. $62+30=92$

5. Complete each blank in the table below.

## G2-M1-Lesson 4

## Making Ten from an Addend of 9, 8, or 7

1. $9+3=\mathbf{1 2}$

2. $8+7=15$

$8+2=10$
$10+5=15$

I can also solve without a drawing.
8 is closer to 10 than 7 , so I can make 10 with the 8 . 8 needs 2 to make 10, so I can break apart 7 with a number bond to get the 2 out.

Now I can add 8 and 2 to get 10 , and now it is easy to add what is left; 10 and 5 is 15 .

So $8+7$ is 15 .

To solve, I can think 10 and what make 12? 10 and 2 make 12 .
4. $9+3=12$

I know 9 is 1 less than 10 , so the answer for $9+_{\ldots}=12$ must be 1 more than $10+_{-}=12$. So $9+3=12$.
5. Ronnie uses 5 brown bricks and 8 red bricks to build a fort. How many bricks does Ronnie use in all?

Ronnie used 13 bricks in all.

## G2-M1-Lesson 5

## Making the Next Ten

1. $9+3=12$

- 
- 

${ }_{\circ}^{\circ} \mathrm{x}$

- x

2. $19+3=\mathbf{2 2}$

$19+1=20$
$20+2=22$

I know 19 is really close to a ten, 20. It just needs 1 more. I can break apart 3 with a number bond to get the 1 out. Now I can add 19 and 1 to get 20 , and it is easy to add 20 and 2. So, $19+3$ is 22 .

38 is close to 40 . I know $8+2=10$, so 38 needs 2 more to make the next ten.
3. $38+7=$ $\qquad$

I can break apart the 7 into 2 and 5 to get 2 out.

In my head, I can add $38+2$ to get 40 . Now, I just add what is left, $40+5$ is 45 , so $38+7=45$.
4. $8+78=$ $\qquad$

62
Using this strategy is easy because I:

- Can break apart numbers, like 8 into 6 and 2 .
$78+2=80$
$80+6=86$
- Know 8 ones need 2 ones to make 10 , so $78+2=80$.
- Know how to add tens and some ones, like $80+6$.

## G2-M1-Lesson 6

1. $20-9=$ $\qquad$

2. $30-7=$ $\qquad$

I can solve without drawing, too!
First, I break apart 30 with a number bond to take out 10 .
Next, I take 7 from 10. I know from my partners to ten that is 3 .
$20+3=23$, so $30-7$ is 23 .
3. $50-8=\underline{42}$

## G2-M1-Lesson 7

## Take from 10

1. $12-9=3$

2. $14-8=\mathbf{6}$

3. Shane has 12 pencils. He gives some pencils to his friends. Now, he has 7 left. How many pencils did he give away?

$$
\begin{aligned}
& 12-7=5 \\
& 10-7=3 \\
& 3+2=5
\end{aligned}
$$

Shane gave away 5 pencils.

## G2-M1-Lesson 8

## Take from 10

2. $61-5=$ $\qquad$

3. Mrs. Watts had 12 tacos. The children ate some. Nine tacos were left. How many tacos did the children eat?

The children ate 3 tacos.
